Santiago, Chile, April 28, 2005. Banco Santander Santiago (NYSE: SAN) announced today its unaudited results for the first quarter 2005. These results are reported on a consolidated basis in accordance with Chilean GAAP^{1,2} in nominal Chilean pesos.

In 1Q 2005 net income totaled Ch\$53,960 million (Ch\$0.29 per share and US\$0.51/ADR), increasing 5.2% compared to 1Q 2004. The Bank's ROE in the quarter reached 21.0% compared to 20.1% in 1Q 2004 and 17.8% for the Chilean banking industry. Core revenues, that is, net financial income plus fees, increased 12.1% in 1Q 2005 compared to 1Q 2004 (from now on, YoY).

* Core revenues: net financial income + fee income

Net financial income increased 12.0% YoY. This increase in net financial income was mainly due to strong loan growth in high yielding segments and products. As of March 31, 2005 total loans increased 5.7% compared to the balance as of December 31, 2004 (from now on, QoQ) and 14.3% YoY. Consumer loans increased 7.1% QoQ and 19.5% YoY. As a result of this growth, the Bank's market share of total loans increased to 23.1% as of March 31, 2005 compared to 22.7% at year-end 2004. Loans as a percentage of assets increased to 70.8% in 1Q 2005 compared to 68.7% as of 1Q 2004.

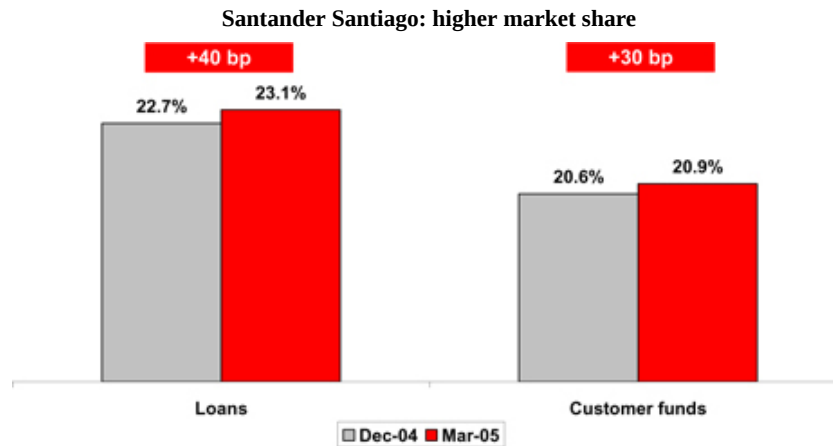

The improvement of the Bank's funding mix has also supported margins. Total customer deposits, that is, time, savings and demand deposits, increased 4.3% QoQ and 21.1% YoY. In 1Q 2005 the

balance of non-interest bearing demand deposits, net of clearing increased 7.4% QoQ and time deposits increased 3.1% in the same period. Mutual funds under management increased 7.8% QoQ and 15.5% YoY. With these growth rates the Bank's market share in total customer funds, that is, customer deposits plus mutual funds, increased 30 bp, from 20.6% at year-end 2004 to 20.9% as of March 31, 2005.

Source: Superintendency of Banks. Customer funds: time, savings and demand deposits plus mutual funds

The Bank's net fee income increased 12.4% YoY. This growth was led by an increase in various fee income lines and segments and was driven among other factors, by an increase in the Bank's client base, an improvement of cross-selling ratios and higher quality of service standards. As a result, checking account fees grew 27.6% YoY. Credit card fee increased 12.5% YoY driven by the investments and promotions made in 2004 to improve credit card usage. Fees from the Bank's subsidiaries also increased in the quarter. Insurance brokerage fees increased 12.4% and mutual fund asset management fees increased 6.3% in 1Q 2005 compared to 1Q 2004.

Asset quality improved in the quarter. Past due loans at March 31, 2005 decreased 4.3% compared to December 31, 2004 and 16.9% YoY. The coverage ratio (reserves for loan losses / past due loans) improved to 135.1% compared to 128.5% at the end of 4Q 2004 and 102.5% at 1Q 2004. The required reserves over total loans ratio as defined by the Superintendency of Banks (SBIF), which measures the expected loss of the loan portfolio, reached 1.86% as March 31, 2005 down from 1.96% in 4Q 2004 and 1.98% in 1Q 2004. The same indicator for the Chilean banking industry as a whole was 1.92% as of March 31, 2005.

Costs showed a stable evolution in the quarter. In 1Q 2005 operating expenses increased 4.1% YoY and the efficiency ratio improved to 41.8% in 1Q 2005 compared to 43.2% in 1Q 2004. Santander Santiago is one of the most efficient banks in all of Latin America. The efficiency ratio for the Chilean banking industry as of March 2005 was 54.8%.

This positive evolution of core revenues was partially offset by (i) the 28.8% YoY fall in net gains from trading and mark-to-market of securities. In 1Q 2004 the rate of decline of long term interest rates was more significant compared to 1Q 2005 and the Bank's fixed income portfolio was larger in 1Q 2004 compared to 1Q 2005; and (ii) lower non-operating results due to higher provisions for non-credit contingencies.

In 1Q 2005 the Bank continued to show strong loan growth in high yielding products with a positive effect on net interest income and margins. As of March 31, 2005 total loans increased 5.7% QoQ and 14.3% YoY. Consumer loans increased 7.1% QoQ and 19.5% YoY. Residential mortgage loans grew 5.8% on a sequential quarterly basis and 36.0% YoY. Commercial loans rose 5.2% QoQ and 21.7% YoY driven mainly by loans granted to high yielding small and mid-sized companies.

As a result of this growth, the Bank's market share of total loans increased to 23.1% as of March 31, 2005 compared to 22.7% at year-end 2004. In this same period its market share in consumer lending increased 40 basis points, reaching 25.2%; in terms of residential mortgage lending was up 70 basis points to 23.5 and in terms of commercial loans grew 20 bp. to 20.5%.

Total retail lending	5,495,639	5,199,991	4,378,824	25.5%	5.7%

Retail loans increased 5.7% QoQ and 25.5% YoY with strong loan growth to both individuals and small and mid-sized companies. This increase was mainly driven by the higher economic activity, low interest rates and the investments made throughout 2004 to expand market share in these segments. These investments included the hiring of additional sales and account executives, opening new branches, reengineering of the mortgage department, modernization of the call center and strong investments to push credit card usage.

Loans to individuals increased 5.1% between December 31, 2004 and March 31, 2005 and 25.9% YoY. Loans to middle and upper income individuals rose 5.2% QoQ and 26.5% YoY (31.0% excluding the sale of Santiago Express). Loan growth in this segment was led by credit card loans that increased 13.1% QoQ and 39.8% YoY. Residential mortgage loans in this segment increased 5.1% QoQ and 34.0% YoY. Finally, installment consumer loans increased 5.6% QoQ and 5.8% YoY (31.7% excluding the sale of Santiago Express).

Loan growth in Santander Banefe continued to gain momentum in the quarter, following the re-launch of the Santander Banefe brand, aggressive marketing campaigns and the opening of 11

Total loans in the corporate banking segment increased 4.6% QoQ and -1.7% YoY. Corporate banking follows a strict profitability driven strategy which is focused mainly on increasing its share of non-lending activities such as cash management, treasury services, corporate finance and advisory services. The QoQ growth was mainly due to the translation gains produced by the 4.8% depreciation of the peso against the dollar between year-end 2004 and March 31, 2005. Loan growth was also driven by a 16.7% QoQ increase in leasing and factoring operations, which are among the higher yielding loans in this segment and represent 10% of total corporate lending.

In 1Q 2005 the funding mix continued to improve and the Bank's deposit base continued to grow at a rapid pace. Management has been focused on improving the funding mix in order to minimize the initial negative impact on margins produced by rising short-term interest rates, since interest bearing liabilities have a shorter duration than interest earning assets. The Bank's strong retail franchise and cash management business have played a key role in the growth of non-interest bearing deposits. The balance of total customer deposits increased 4.3% QoQ and 21.1% YoY. In 1Q 2005 the balance of non-interest bearing demand deposits, net of clearing increased 7.4% QoQ and time deposits increased 3.1% in the same period. Assets under management increased 7.8% QoQ and 15.5% YoY. The rise in short term interest rates and the negative inflation resulted in a larger demand for mutual funds vs. time deposits. Market share of assets managed reached 21.2% as of March 2005 compared to 19.6% at year-end 2004.

With these growth rates the Bank's market share in total customer funds increased 30 bp., from 20.6% at year-end 2004 to 20.9% as of March 31, 2005.

In 1Q 2005 Fitch Ratings upgraded the long-term and short-term foreign-currency ratings of Banco Santander Chile 'A' from 'A-' and to 'F1' from 'F2', respectively. The ratings followed the recent upgrade of Chile's sovereign long-term foreign currency ratings. These are the highest rating of a private company in Latin America. In addition, Moody's modified the outlook for the Bank's foreign currency ratings from Stable to Positive, following a similar change in outlook for the Chilean sovereign ratings.

** Inflation measured as the variation of the Unidad de Fomento in the quarter.

Net interest income in 1Q 2005 increased 12.0% compared to 1Q 2004. This rise was mainly driven by the 14.7% increase in average interest earning assets in the same period. The net interest margin reached 4.2% in 1Q 2005 compared to 4.3% 1Q 2004. This evolution was mainly due to:

- **Lower inflation rate.** The quarterly inflation rate in 1Q 2005 was -0.68% compared to -0.59% in 1Q 2004. This had a negative effect over margins due to the negative gap between assets and liabilities denominated in Unidades de Fomento (UF, an inflation linked currency). The UF gap results from the Bank's investment in liquid, low risk financial investments denominated in UF funded through deposits denominated in nominal pesos. This is partially offset by the positive results from price level restatement. Including price level restatement, the Bank's net interest margin reached 4.4% in 1Q 2005 compared to 4.4% in 1Q 2004.
- **Higher interest rates.** During 1Q 2005 the average overnight interbank rate was 2.65% compared to 1.78% in 1Q 2004. This had a negative effect on margins in the quarter as interest bearing liabilities have a shorter duration than interest earning assets and, therefore, repriced at a faster rate. This results in a downward pressure on margins in the short-term when interest rates begin to increase. This was partially offset by the positive effect on margins in 1Q 2005 compared to 1Q 2004 of the rise in the spread earned over the re-investment of non-interest bearing liabilities and capital.

⁴ For analysis purposes results from foreign exchange transactions, which consist mainly of the results of forward contracts that hedge foreign currency positions, has been included in the calculation of the net financial income and net financial margin. Under SBIF guidelines these gains/losses are not be considered interest revenue, but are included as gains/losses from foreign exchange transactions and, accordingly, registered in a different line of the income statement. This distorts net interest income and foreign exchange transaction gains especially in periods of high volatility of the exchange rate. The results of these hedging positions have been added to net financial income to give a clearer indication of the Bank's real net interest margin.

- Improved asset mix.** The effect of negative inflation on margins was also partially offset by the improved asset mix. As of March 31, 2005 total loans increased 14.3% and consumer loans increased 19.5% compared to 1Q 2004. Loans as a percentage of assets increased to 70.8% in 1Q 2005 compared to 68.7% as of 1Q 2004.

Net interest income in 1Q 2005 decreased 7.8% compared to 4Q 2004. Average interest earning assets increased 3.6% and the net interest margin decreased from 4.7% to 4.2%. This was mainly due to the seasonally lower inflation rate (+0.73 in 4Q 2004 vs. -0.68 in 1Q 2005), which as mentioned above has a negative effect on net interest margins.

The Bank's margins have evolved more favorably compared to the Chilean Financial System. On an unconsolidated basis and including price level restatement, the gap between the Bank's net interest margin and the banking industry as a whole was 42 basis points in 1Q 2005 compared to 28 basis points as of March 2004.

** Gross charge-off ratio = Total provisions and charge-offs annualized divided by total loans

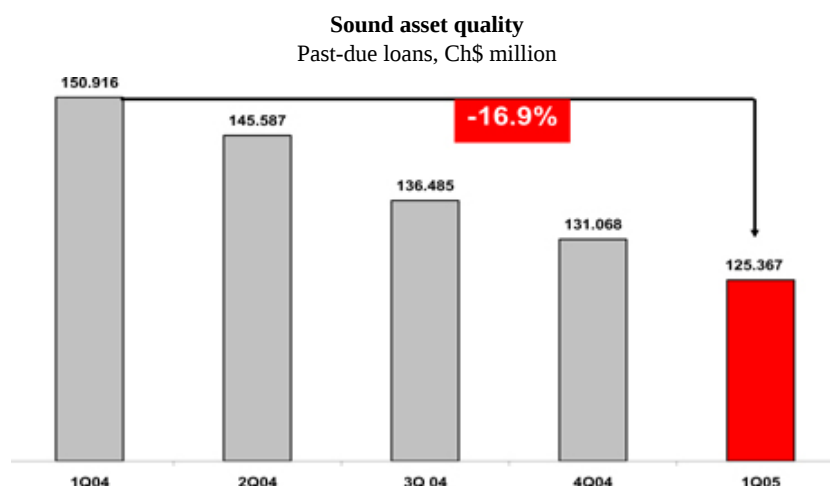

*** Net charge-off ratio = Total provisions, net of loan loss recoveries annualized divided by total loans.

Total provisions, net of loan loss recoveries, increased 19.7% compared to 1Q 2004. This rise was due in part to the 5.9% decrease in loan loss recoveries in the period. The fall in recoveries was mainly due to the decrease in the pool of recoverable loans as a result of high levels of recoveries in 2004 and the improved economic environment.

Excluding recoveries, total provisions and charge-offs increased 10.1% QoQ. This rise was mainly due to the increase in the Bank's loan portfolio that increased 14.3% YoY. The gross charge-off ratio (annualized provisions and charge-offs divided by total loans) improved from 1.14% in 1Q 2004 to 1.10% in 1Q 2005 as asset quality improved and the expected loss of the Bank's loan portfolio decreased in the period. Past due loans at March 31, 2005 decreased 4.3% compared to December 31, 2004 and 16.9% YoY. The coverage ratio (reserves for loan losses / past due loans) improved to 135.1% compared to 128.5% at the end of 4Q 2004 and 102.5% at 1Q 2004. The required reserves over total loans ratio as defined by the SBIF, which measures the expected loss of the loan portfolio, reached 1.86% as March 31, 2005 down from 1.95% in 4Q 2004 and 1.98% in 1Q 2004. The same indicator for the Chilean banking industry as a whole was 1.92% as of March 31, 2005.

FEE INCOME

Fee income increases as the client base rises and cross-selling ratios improve

Fee income (Ch\$ million)	Quarter			Change %	
	1Q 2005	4Q 2004	1Q 2004	1Q 2005 / 2005/2004	1Q 2005 / 4Q 2004

Total fee income, net	30,847	35,646	27,453	12.4%	(13.5)%

The Bank's net fee income increased 12.4% compared to 1Q 2004. This growth was led by an increase in various fee income lines and segments and was driven by an increase in the Bank's client base, an improvement of cross-selling ratios and higher quality of service standards. In 1Q 2005 total retail client base rose 8.4% QoQ and the number of total checking accounts rose 3.4% in the same period. The amount of retail clients that use 4 or more products also grew 8.8% QoQ. The attrition rate (clients lost divided by total client base) also descended to 7.8% as of March 2005 down from 9.2% at year-end 2004. The 13.5% decrease QoQ of fee income was mainly due to seasonal factors.

In terms of products, checking account fees grew 27.6% YoY. This rise is directly related to the increase in client base and lower attrition rates. Credit card fee increased 12.5% YoY driven by the investments and promotions made in 2004 to improve credit card usage. Fees from the Bank's subsidiaries also increased in the quarter. Insurance brokerage fees increased 12.4% and mutual fund asset management fees increased 6.3% in 1Q 2005 compared to 1Q 2004.

In 1Q 2005 operating expenses increased 4.1% compared to 1Q 2004 and the efficiency ratio improved to 41.8% in 1Q 2005 compared to 43.2% in 1Q 2004. The efficiency ratio for the Chilean banking industry as of March 2005 was 54.8%. The 9.8% YoY increase in personnel expenses was mainly due to higher performance related compensation paid to commercial teams as a result of greater commercial growth in retail banking. Administrative expenses increased 1.5% QoQ reflecting the stabilization of expenses in 2005 after the strong investments made in 2004 in order to expand the Bank's presence in retail banking.

The 7.9% QoQ decrease in operating expenses was mainly due to seasonal factors and lower amount of expenses being carried out in 2005, following the strong investments made in 2004 to expand the Bank's retail banking activities

* The gains (loss) from foreign exchange transactions are included in the analysis of net financial income (See Net Financial Income)

The net results from trading and mark-to-market of securities was a gain of Ch\$11,446 million in 1Q 2005. This gain can be explained by the decline in long-term interest rates in 1Q 2005 compared to the level of long term interest rates at year-end 2004.

Despite these gains, the net gain from trading and mark-to-market of securities decreased 28.8% YoY as the rate of decline in long term interest rates was more significant in 1Q 2004 compared to 1Q 2005 and the Bank's fixed income portfolio was larger in 1Q 2004 compared to 1Q 2005. In 4Q 2004 long term interest rates rose and produced a loss from the mark-to-market of fixed income instruments.

Other operating losses, net totaled a loss of Ch\$5,962 million, increasing 6.5% QoQ. This increase is mainly due to a rise in variable sales force expenses and in line with greater retail banking activity. The 30.0% decrease QoQ of other operating losses, net was mainly due to the recognition of extraordinary deferred sales force expenses in 4Q 2004. When a bank product is sold the fee earned by the sales force is recognized in this line item on an accrued basis. As a result of the sale of Santiago Express in December 2004, the Bank had to recognize Ch\$3,944 million in deferred sales force expenses that had already been incurred on a cash basis.

Income tax	(12,555)	(12,222)	(11,289)	11.2%	2.7%

In 1Q 2005 net non-operating results totaled a loss of Ch\$12,435 million which represents an increase of 49.3% compared to 1Q 2004. The main items included in non-operating results are the charge-off of repossessed assets, the net gain or loss from the sale of repossessed assets and provision for non-credit related contingencies. The rise in the net losses from non-operating results was mainly due to the recognition of a higher level of provisions for non-credit related contingencies and higher charge-off of repossessed assets.

The decrease in net non-operating results between 4Q 2004 and 1Q 2005 was mainly due to the Ch\$21,473 million one-time gain recognized in 4Q 2004 from the sale of Santiago Express to Empresas París.

The gain from price level restatement totaled Ch\$5,964 million in 1Q 2005 compared to a gain of Ch\$3,650 million in 1Q 2004. In 1Q 2005 the inflation rate measured by the variation of the UF was -0.68% compared to -0.59% in the same quarter of 2004. The Bank must adjust its capital, fixed assets and other assets for the variations in price levels. Since the Bank's capital is larger than the sum of fixed and other assets, if inflation is negative in a period, the results from price level restatement are positive. For the rest of 2005 the Bank's expects positive inflation rates and a loss from price level restatement.
